experience

Charles Schwab [Associate .NET Engineer]

June 2026 – Present

Build agentic workflows that automate tasks. Develop applications that offer more efficient alternatives to existing tools.

Paycom [Full-Stack Software Developer II]

November 2024 – February 2026

Built and modernized applications for government document management, workforce analytics, and employee performance tracking. Improved application and database performance, reducing page load times by 50% and query execution from approximately 8 seconds to 12 milliseconds. Delivered features through production with automated testing and resolved client-impacting issues.

CGI [Backend Software Developer]

June 2023 – October 2024

Built backend services and modernized payroll, finance, and timesheet workflows using Java, Python, and SQL. Created an automation tool that migrated 12,000 legacy Java files containing over 160,000 lines of code, completing the migration six months ahead of schedule. Partnered with system architects to deliver time-critical payroll enhancements ahead of schedule.

passion projects

LivedMatch [Research Startup]

livedmatch.com

Built a patient-trial matching platform with researchers in Canada, using compatibility scoring to support more objective participant selection. Added role-based access, automated outreach, and a deployment pipeline for testing new features.

Aycorn [Integrations]

github.com/AntonioRivera03/AIcorn

Integrated AI agents into Aycorn to plan tasks, implement changes, and review code. Added isolated development workspaces and Kubernetes previews for testing application versions before merging changes.

Magnolia

github.com/AntonioRivera03/JournalAssistant

Built a PDF reader that connects highlighted passages to saved AI conversations. Added local OCR, semantic search, and source citations to help readers explore documents and return to the relevant pages.

DocViewer

github.com/AntonioRivera03/DocViewer

Built a native Linux application for reading PDFs and editing text and Markdown documents. Added folder navigation, continuous PDF scrolling, and Markdown previews in a lightweight desktop interface.

skills

languages	C#, Java, Python, TypeScript, SQL, PHP, Go, Rust, JavaScript, Kotlin, Dart, Shell, HTML, CSS
ai	Agentic Workflows, AI Integrations, MCP (Model Context Protocol), RAG (Retrieval-Augmented Generation), Vector Databases (Qdrant), Hybrid Search Retrieval, OCR (RapidOCR)
data	NeonDB (PostgreSQL), SQLite, MongoDB, NoSQL, Supabase, Pandas, JDBC, Database Design
domains	Government Compliance, Payroll Systems
frameworks	.NET, React, Next.js, Express, FastAPI, Flask, Django, Laminas, Prisma, Three.js, Tailwind CSS, shadcn, Vite
infrastructure	Docker, Kubernetes, Docker Compose, AWS, Google Cloud (GCP), Cloudflare, Vercel, Linux, CI/CD, Git, GitHub
practice	REST APIs, API Design, Microservices, Unit Testing, PHPUnit, Selenium, Frontend Test Automation, Web Scraping, Responsive Design
native	GTK4, ratatui, Poppler, Cairo
